Annual Report
2013-2014

Introduction

A new decade of CCDS's work has brought with it several new opportunities, ideas and projects.

Last year, CCDS began a strategic review process and we defined independent & inclusive media, urban poverty & governance, and youth & social exclusion as important areas of focus for the institution.

Several new projects in 2013-14 have dovetailed perfectly with these focus areas.

We began a study, supported by Action Aid, of urban poverty and governance in two contrasting Indian cities – Pune, with an exploding population and 40% of the city living in slums, and Thiruvananthapuram, a smaller city in a highly urbanised state with a long history of decentralised governance, where poverty is less visible and confined to pockets of social exclusion. Our study maps the quality of public services available to the poor and the extent to which the concerns and needs of the marginalized are addressed by policymakers and governments.

Alongside these city-level studies, we mapped broad national trends in urbanisation, urban poverty and vulnerability. A comprehensive volume of *Infochange Agenda* on trends in urbanisation was published this year. A sequel to this volume, on urban poverty, will be released shortly.

We also began a major research study on digital inequality and barriers to internet access for the urban poor. Our study, located in 10 low-income settlements of Pune and twin city Pimpri-Chinchwad, examines infrastructural, economic, social and cultural barriers to internet access for poor and excluded communities in urban India. The two-year study is supported by Ford Foundation.

For the internet access study, we are combining quantitative and qualitative research methodologies with reportage and video documentation. The study will illustrate the extent of

digital inequality in a growing metropolis and point to the ways in which the digital divide is likely to deepen existing socio-economic inequalities. It will recommend changes in public policy and public initiatives for the inclusion of the marginalized in the information society.

These new projects have also taken CCDS's outreach and capacity-building in new directions and to new audiences. Our civil society and youth outreach so far has focused on the middle class. This year we have reached out to low-income urban communities, and the most

vulnerable groups amongst them, including dalits, religious minorities, and women. We have created learning and campaign material on the importance of digital inclusion, and conducted internet literacy workshops and trainings in urban settlements, particularly for women.

Our interactions with these socially-excluded communities have brought home to us the extent of social exclusion in our globalizing cities, and the acute limitations of access/opportunity/learning environments/social support for the marginalized.

Meanwhile, our project office in Kerala, the Institute for Sustainable Development and Governance (ISDG), has been working on a budget analysis and advocacy initiative at the Kerala state level. ISDG's initiatives have had an important influence on policy, institutionalising pre-budget consultations with citizens and civil society organisations in the state.

ACTIVITIES/ ISSUES ADDRESSED

Cultural diversity

Kiski Kahani, our 18-month project that documented and celebrated the diversity of the Ramayana tradition, concluded in the first quarter of this financial year, with the publication and release of a book titled *Kiski Kahani: Personal Journeys with the Ramayana*. The volume negotiates the open spaces that the Ramayana occupies in 21st century India as the epic is re-imagined and retold in literature, song and art. With essays by writers and scholars including Jyoti Punwani, Rajni Bakshi, Pam Puniyani, Ramdas Lamb and Priya Sarukkai Chabria, the volume begins with an excerpt from A K Ramanujan's essay on Three Hundred Ramayanas. The essay that was first delivered as a lecture by Ramanujan in 1985-86 was deleted more than 25 years later from the Delhi University BA history syllabus following protests from right-wing forces. The controversy over the essay underlines the way pluralism is being threatened and replaced by monolithic narratives and emphasizes the relevance of projects such as Kiski Kahani in upholding India's plural traditions.

In April, Bangalore Open Space Fellow Sunil Mohan presented his video archive of interviews with 25 individuals with trans identities at Open Space. Sunil identifies as female-to-male transgender himself. About 25 people attended the presentation and discussion.

Open Space also produced a short film on Sunil's personal and political journey as a trans activist, *The Space Between Genders*. The film is directed by Sushmit Ghosh and Rintu Thomas.

Urbanisation and urban poverty

Infochange Agenda: A volume of *Infochange Agenda* on trends in urbanization was published this year. Guest-edited by senior environmental journalist Darryl D'Monte, the issue looked at the fine print of Census 2011's revelation that the urban population had increased more than the rural. It pointed out that this increase had less to do with agrarian distress and consequent migration into cities and more to do with census activism that has tripled the number of urban centres. Demographic specialists including Amitabh Kundu and Debolina Kundu addressed misconceptions of an urban explosion and pointed to the deceleration in population of million-plus cities, possibly because of the exclusionary policies that are discouraging the inflow of the rural poor. CP Chandrasekhar pointed out that multidimensional poverty in urban India would be double the official figure of 21% for

income poverty and suggested that the wealthy enclaves of urban India are being built on the surpluses extracted from an exploited labour force. Partha Mukhopadhyay, Kalpana Sharma and others examined the state of governance in India's vibrant small towns and cities, which get none of the attention that our mega-cities get.

Two-city study of urban poverty and governance: In July we began work on a study, supported by Action Aid, of poverty and marginalization in Pune and Thiruvananthapuram, exploring access of the poor to public services, the extent to which the concerns of the poor are addressed, and the extent to which they are able to participate in governance.

As part of this project we are also working on a volume of *Infochange Agenda* that will provide perspective and analysis on urban poverty at the national level.

Digital inequality

In July we also began work on a two-year study of digital inequality in Pune. This study identifies infrastructural/social/cultural barriers to internet access among low-income and socially excluded communities in a growing Indian city, viz Pune. As the use of ICTs becomes more and more fundamental to being socially, economically, culturally and politically involved in 21st-century society, digital inequality is set to deepen existing social and economic divides.

The digital divide is not just the gap between those with and without access. New patterns of digital inequality are emerging. The digital divide is now recognized as a much more complex issue of how people use ICTs, their skill sets and digital literacy.

About CCDS

CCDS aims to build an open and inclusive society by creating knowledge resources on social inclusion, equitable development, pluralism and democratic governance, and promoting open spaces where the marginalised can access information and knowledge, make their voices heard and press for change on their own behalf.

We support independent media, diversity of opinion, and the opportunity for everyone to participate in the network society where wealth, power and knowledge-generation are largely dependent on the ability to reap the benefits of digital communication.

CCDS took an early lead in the creation of open-access knowledge resources for the social sector in India. Our resource base www.infochangeindia.org went online in 2001, featuring original reportage and analysis on development issues – including poverty, livelihoods, food security, gender equity, child rights and public health – by a wide network of journalists, academics, activists and researchers. We have compiled and published 27 volumes of research and reportage in our online and print journal *Infochange Agenda*.

CCDS also pioneered Open Space, a youth outreach programme that uses cultural and creative processes to enable young adults to recognise social and political contradictions and take action based on that understanding. Open Space has interacted with over 2,000 young adults every year in Pune since 2004, and has also been active in Thiruvananthapuram, Ahmedabad, Kolkata and Lucknow.

Since 2013, CCDS has focused its research on urban poverty and governance and the digital divide/inequality in urban India.
